JOURNAL OF POWER SOURCES VOLUME 44, NUMBERS 1–3, APRIL 15, 1993

Contents

Posters

Electrolytes

Anodic stability of propylene carbonate on manganese dioxide electrodes. 341
E. Cattaneo and J. Ruch (Brilon, Germany)

Conductivity and stability towards lithium metal of lithium triflate ($LiCF_3SO_3$) and lithium bistrifluorosulfonylimide $Li(SO_2CF_3)_2N$ in amines and their mixtures with ammonia 349
B. Fahys, N. Akturk (Besançon, France) and M. Herlem (Meudon, France)

Relationship between composition of the electrolyte solutions and energetic performance of 1.5 V non-aqueous cells of lithium/iron sulfide system. 355
L. Werblan, A. Bałkowska, J. Izydorek (Warszawa, Poland), J. Downarowicz, B. Polszakiewicz, B. Szcześniak, R. Szłapka and I. Walas (Poznań, Poland)

Lithium Interface

Ionic transport in passivating layers on the lithium electrode 365
E. S. Nimon, A. V. Churikov, A. V. Shirokov, A. L. Lvov and A. N. Chuvashkin (Saratov, Russian Federation)

Modification of lithium/electrolyte interface by plasma polymerization of 1,1-difluoroethene. 377
Z. Takehara, Z. Ogumi, Y. Uchimoto, K. Yasuda and H. Yoshida (Kyoto, Japan)

Polymer electrolyte coatings for lithium anodes in $SOCl_2$ cells 385
K. M. Abraham, D. M. Pasquariello, M. Alamgir (Norwood, MA, USA) and W. P. Kilroy (Silver Spring, MA, USA)

Space-charge model of the SEI conduction in the $Li/SOCl_2$ system 391
M. Gaberšček, J. Jamnik and S. Pejovnik (Ljubljana, Slovenia)

Lithium Rechargeability, Insertion Anodes

Studies of carbon as negative electrode materials for secondary lithium batteries 399
H. Yang, X. Ai, M. Lei and S. Li (Wuhan, China)

Lithium-cycling efficiency in inorganic electrolyte solution 405
H.-J. Dünger, G. Hambitzer and W. Lutter (Pfinztal, Germany)

Stability of lithiated carbon electrodes in organic electrolytes 409
R. Bittihn, R. Herr and D. Hoge (Kelkheim/Taunus, Germany)

Inorganic film-forming electrolyte additives improving the cycling behaviour of metallic lithium electrodes and the self-discharge of carbon–lithium electrodes 413
J. O. Besenhard, M. W. Wagner, M. Winter (Münster, Germany), A. D. Jannakoudakis, P. D. Jannakoudakis and E. Theodoridou (Thessaloniki, Greece)

Investigations on rechargeable lithium alloys on the basis of Al–Ni and Al–Mn alloys 421
I. Hauke, S. Machill, D. Rahner and K. Wiesener (Dresden, Germany)

Elsevier Sequoia

Polymer Electrolytes

Impedance study for the interface and whole battery with PAN-based polymer electrolyte 431
R. Xue, H. Huang, M. Menetrier and L. Chen (Beijing, China)

Polarization behavior of lithium electrode in polymeric solid electrolytes 439
Y. Matsuda, M. Morita and H. Tsutsumi (Ube, Japan)

New conducting polymer networks 445
X. Andrieu, J. P. Boeuve and T. Vicédo (Marcoussis, France)

Lithium/polymer/polymer solid-state rechargeable batteries 453
C. Arbizzani, A. M. Marinangeli, M. Mastragostino, L. Meneghello (Bologna, Italy), T. Hamaide and A. Guyot (Vernaison, France)

Two-and three-electrode studies of cycling in experimental polymer electrolyte cells 461
P. B. Bruce, F. Krok, C. A. Vincent (Fife, UK) and R. Koksbang (Odense, Denmark)

Block copolymers of poly(ethylene oxide) materials for polymer electrolytes (transport properties) 467
P. Lobitz, A. Reiche and H. Füllbier (Greifswald, Germany)

Enhancement of the ionic conductivity and the amorphous state of solid polymer electrolytes for rechargeable lithium batteries. 473
H. Bischoff, D. Rahner, K. Wiesener (Dresden, Germany), T. Steurich and R. Sandner (Merseburg, Germany)

The $Li_xTiS_2|Li_{(1-x)}CoO_2$ solid-state rocking chair battery 481
F. Croce, S. Passerini, B. Scrosati (Rome, Italy), E. Plichta, W. Behl, M. Salomon (Fort Monmouth, Nj, USA) and D. Schleich (Brooklyn, NY, USA)

Thin-film Technology, Solid Electrolytes

All-solid-state lithium microbatteries. 487
X. Huang, L. Chen and J. Schoonman (Delft, Netherlands)

Metallized microporous polypropylene membranes as a support for thin-film electrodes 493
J. O. Besenhard, M. Hess, J. Huslage, U. Krebber (Münster, Germany) and K. Jurewicz (Poznań, Poland)

Polyaniline used as a positive in solid-state lithium battery 499
L. S. Yang, Z. Q. Shan, P. M. Hou, W. X. Chen and L. Liu (Tianjin, China)

A thin-film solid-state microbattery. 505
S. D. Jones and J. R. Akridge (Westlake, OH, USA)

Safety of Lithium Batteries

Thermal stability of lithium anodes in an amorphous V_2O_5/Li battery system 517
M. Arakawa, Y. Nemoto, S. Tobishima, M. Ichimura (Ibaraki-ken, Japan) and J. Yamaki (Burnaby, BC, Canada)

Safety study of electrolyte solutions for lithium batteries by accelerating-rate calorimetry 523
K. Hasegawa and Y. Arakawa (Mie, Japan)

Secondary Cathodes

Electrochemical and structural studies of the composite MnO_2 cathode doped with metal oxides 533
S. Li, Z. Shi, C. Yang and H. Yang (Wuhan, China)

Studies of spinel $LiCr_xMn_{2-x}O_4$ for secondary lithium battery 539
W. Baochen, X. Yongyao, F. Li and Z. Dongjiang (Changchun, China)

Insertion of lithium into RuO_2–TiO_2 electrodes 547
J. Vondrák, I. Jakubec and J. Bludská (Praha, Czech Republic)

Rechargeable lithium battery with spinel-related λ-MnO_2 I. Synthesis of λ-MnO_2 for battery applications 551
V. Manev, A. Momchilov, A. Nassalevska (Sofia, Bulgaria) and A. Kozawa (Aichi, Japan)

Potassium vanadates – promising materials for secondary lithium batteries 561
V. Manev, A. Momchilov, A. Nassalevska (Sofia, Bulgaria), G. Pistoia and M. Pasquali (Roma, Italy)

Rechargeable γ-MnO_2 for lithium batteries using a sulfone-based electrolyte at 150 °C 569
S. Bach, N. Baffier (Paris, France), J. P. Pereira-Ramos and R. Messina (Thiais, France)

V_2O_4S – a new transition metal oxysulfide as positive for lithium batteries 577
G. Tchangbedji, D. A. Odink and G. Ouvrard (Nantes, France)

Rechargeable $LiCoO_2$ in inorganic electrolyte solution 583
J. Dreher, B. Haas and G. Hambitzer (Pfinztal, Germany)

Characterization of $Cu_2V_2O_7$ as cathode material for lithium cells by X-ray and photoelectron spectroscopy 589
D. Ilic and D. Neumann (Ellwangen, Germany)

The cycling properties of the $Li_xNi_{1-y}Co_yO_2$ electrode 595
C. Delmas, I. Saadoune and A. Rougier (Talence, France)

Reversible potassium vanadium bronze cathodes ($K_xV_6O_{13+y}$) with various potassium to vanadium ratios 603
E. Andrukaitis (Ottawa, Ont., Canada)

Improvement of heavy-drain discharge properties of polypyrrole cathode by the electro-codeposition of carbon powder 611
M. Nagashima, T. Mine, Y. Ikezawa and T. Takamura (Tokyo, Japan)

Thiospinels as cathode for lithium secondary battery 619
N. Imanishi, K. Inoue, Y. Takeda and O. Yamamoto (Mie, Japan)

Application of FeOOH derivatives for a secondary lithium battery 627
Z. Takehara, H. Sakaebe and K. Kanamura (Kyoto, Japan)

Preparation and electrochemical characteristics of new Li–Mn–V–O system as positive materials for rechargeable lithium batteries 635
N. Kumagai, T. Fufjiwara and K. Tanno (Morioka, Japan)

Inhomogeneous electrochemical lithiation of V_2O_5–TeO_2 binary glasses in a propylene carbonate solution 645
T. Miura and T. Kishi (Yokohama, Japan)

Nickel chevrel-phase sulfides $Ni_yMo_6S_{8-z}$ and $Ni_yMo_6S_{8-z}O_n$ as the cathode of lithium secondary batteries 651
M. Wakihara, H. Ikuta and T. Uchida (Tokyo, Japan)

Structural and electrochemical characteristics of a hollandite-type 'Li_xMnO_2' 657
Ph. Botkovitz, Ph. Deniard, M. Tournoux and R. Brec (Nantes, France)

Rechargeable Systems

Development of cylindrical secondary lithium/polyaniline batteries. 669
L. Changzhi, Z. Borong and W. Baochen (Changchun, China)

A rechargeable Li/Li_xCoO_2 cell incorporating a $LiCF_3SO_3$–NMP electrolyte 673
G. T. K. Fey, M. C. Hsieh, H. K. Jaw and T. J. Lee (Taiwan, ROC)

A high performance Li_xMnO_y cathode material for rechargeable lithium cells 681
M. A. Humbert, Ph. Biensan, M. Broussely (Poitiers, France), A. Lecerf (Rennes, France), A. Dollé and H. Ladhily (Tertre, Belgium)

An update of the Li metal-free rechargeable battery based on $Li_{1+x}Mn_2O_4$ cathodes and carbon anodes 689
J. M. Tarascon, D. Guyomard and G. L. Baker (Red Bank, NJ, USA)

Copper (II) sulfide as cathode active material in secondary lithium batteries 701
I. Exnar and J. Hep (Itingen, Switzerland)

Primary Cathodes

Relationship of cathode pore size distribution and rated capacity in Li/MnO_2 cells 709
T. J. Lee, T. T. Cheng, H. K. Juang, S. Y. Chen, G. T. K. Fey and H. K. Jaw (Taiwan, ROC)

High Power Lithium Batteries

Optimized lithium oxyhalide cells. 715
W. P. Kilroy (Silver Spring, MD, USA), C. Schlaikjer, P. Polsonetti and M. Jones (Hyde Park, MA, USA)

New Investigation Techniques, Cell Modelling

Volatile products of electrode reactions in inorganic electrolyte 727
G. Hambitzer, M. Joos and U. Schriever (Pfinztal, Germany)

Discharge performance of composition insertion electrodes Analysis of discharges of 50 vol. % Li_3N/TiS_2 electrodes 733
B. C. Knutz, K. West, B. Zachau-Christiansen and S. Atlung (Lyngby, Denmark)
